## Stainless steel showerheads and Piega series, CRISTINA presents the new Inox Collection products

 By Redazione - 24 May 2023

In the taps designed by **CRISTINA Rubinetterie**, the highest functional performance always goes together with care for design and refined aesthetics, perfectly embodying the typical values of Made in Italy. This is true also for the products included in the **Inox Collection**, which in 2023 introduces two important proposals: the **Stainless steel showerheads with lighting** (design **Alessandra Bertini - Phicubo**) and the **Piega series** (design **Bellucci Mazzoni Progetti**).

## STAINLESS STEEL SHOWERHEADS

The showerhead is inspired by the surprising effects created by fountains that can be encountered during a summer walk, on a sunny day. Sudden bursts and plays of light, whose source is mysterious to the eyes, which amaze and fascinate. To recreate that wonder, the designer positioned the light between two blades and placed jets that would drag it along their path. Moreover, the use of steel gave her the opportunity to enhance thin and minimal forms like a pencil stroke, but capable of creating important jets, like the waterfall that underlines the profile of the inclined sheet metal, developing across the entire width of the showerhead.

Available in non-mist and wall-mounted versions, in the finishes Brushed Pink Gold PVD – 34I, Brushed Black Chrome PVD – 75I and Polished Gold Brass PVD – 96I.

## PIEGA SERIES

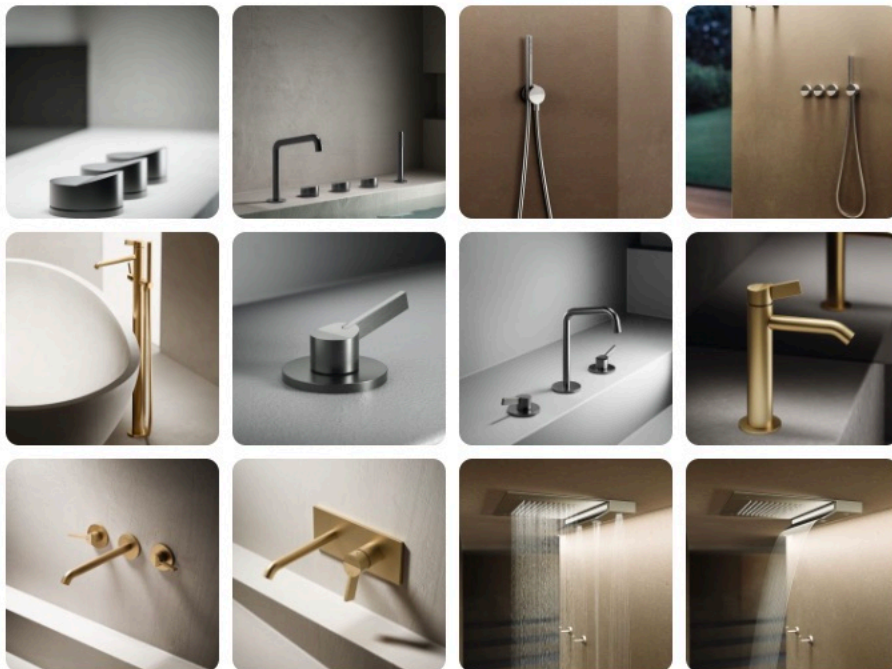

The Piega series, entirely made of stainless steel, belongs to the Inox Collection. For the first time in CRISTINA Rubinetterie's production history, the PVD (Physical Vapour Deposition) treatment – until now used only for different metal versions – is applied to stainless steel too. Besides the brushed Aisi stainless steel, the series is available in brushed pink gold PVD, brushed black chrome PVD and brushed brass gold PVD.

The name already reveals the characteristic of the project. The elements of the series have an undoubted personality, as well as order and formal cleanliness. The detail of the lever that fits into the cylinder is treated with the same care as a piece of jewellery, while the slight curvature that characterises the round knobs of the wall, shower and bath version creates elegant reflections of light. The collection, more than complete, includes all the elements that make up the varied scene of the bathroom habitat by CRISTINA – the sink alone has about ten variations – made only of stainless steel (the perfect material for the minimal lines of the brand), in a bright, luminous and warm finish.

The Bellucci Mazzoni Progetti's designers explain: *"We wanted to create a collection with a particular sign. The line itself is simple and is noticed for the upward inclination of the upper part of the tap, a motif repeated throughout the elements of the entire collection."*

These new CRISTINA Rubinetterie products, together with many other solutions designed and created by the brand, are waiting for you in the **Showroom CRISTINA Brera**, via Pontaccio 8/10 in Milan. Are you ready to discover them all?
